Replace your corrugated shippers with Coroplast® and watch your savings stack up!

## Reusable Packaging Builds Your Bottom Line

In closed distribution loops, nothing beats the cost effectiveness of Coroplast®. With long-lasting Coroplast® packaging, you can easily realize 10 or more shipping cycles, allowing you to drive down distribution costs. Because crush-resistant Coroplast® outperforms paper, you can minimize damage claims, too.

## Hard-Working Dunnage Solutions

Protect your products from damage in transit with dunnage made of Coroplast®. Ideal for electronic components, chrome and glass parts and painted finishes, durable Coroplast® packaging can prevent abrasion, neutralize electrostatic discharge, inhibit moisture and offer flame-resistance.

## Laminations Protect Parts and Components

Your parts and components are too valuable to risk during shipping. That's why Coroplast® offers superior selection and quality in laminations that cushion your products so they stay safe, secure and separated in transit.
